

SGA International Small Cap Equity

Third Quarter Commentary

International markets retreated during the third quarter with considerable volatility in August as slowing global growth and continued trade tensions weighed on investor sentiment. International small cap stocks, as measured by the MSCI World ex USA Small Cap Net Index, returned -0.27% in the third quarter. In this environment, the SGA International Small Cap Equity strategy underperformed the benchmark.

The SGA Alpha Model underperformed for the quarter among non-U.S. small cap developed equities, as several trends from earlier in the year reversed during the quarter. The Valuation category was the strongest contributor while the Growth category was the largest detractor. The Sentiment category performed well early in the quarter when momentum was rewarded in terms of both price and analyst expectations but reversed in the second half of the quarter.

From a sector perspective, stock selection was negative in Materials, and Energy, partially offset by positive selection in Information Technology and Communication Services. In Materials, Evraz and Ferrexpo were among the larger detractors. Steel and vanadium producer Evraz was impacted by price declines for vanadium. In Information Technology, Japan-based semiconductor company Advantest benefited from strong demand for its 5G chip testers which resulted in analysts upgrading growth expectations.

From a country perspective, stock selection was weak in France, the U.K., and Australia, partially offset by positive selection in Germany and Japan. French pharmaceutical drug maker Ipsen SA declined after a competitor received generic approval for a competing drug in Europe. In Japan, video game maker Capcom delivered strong earnings ahead of consensus expectations, driven by high repeat sales of its hit Monster Hunter game franchise.

*Holdings, sector, country, and regional diversification represents the holdings, sectors, and country weights in the SGA International Small Cap Equity portfolio as of the date noted. These holdings, sectors, country, and regional weights are subject to change at any time without notice. Individual account data may vary. This information is supplemental to the annual disclosure presentation.

The MSCI World ex USA Small Cap Index (Net) is a free float-adjusted market capitalization weighted index that is designed to measure the equity market performance of small cap securities in the developed markets excluding the U.S. The MSCI World ex USA Small Cap Index (Net) returns include reinvestment of dividends and other earnings, and are not available for direct investment.

Investors should consider all factors, including investment objectives, fee charges, other expenses and risks carefully before investing in this product. A foreign investment offers diversifying characteristics, but also involves greater risks than investing in securities of U.S. issuers, including currency, political and stock specific risks. SGA products may have a negative return in a variety of markets whether rising or falling. The foreign security performance can be volatile and investors could lose a substantial amount of their investments. This material should not be reproduced or distributed to anyone else, but used solely by the recipient and their investment advisors. This material provides information on Strategic Global Advisors and their investment strategies and is not intended to be construed as an offer to sell or buy their products.

There is potential for shortfall in any investment process due to a variety of factors including, but not limited to, data and system imperfections, analyst judgment, and the complex nature of designing and implementing portfolio construction systems and other quantitative models. Such shortfalls in systematic or quantitative processes in particular pose broader risk because they may be more pervasive in nature. Furthermore, SGA's systems may not necessarily perform in a manner in which they have historically performed or were intended to perform. SGA recognizes that such shortfalls are inherent to both fundamental and systematic or quantitative processes, and believes that combining both approaches improves the opportunity to reduce these shortfalls. However, these efforts may not necessarily result in the identification of profitable investments or the management of risk.

N/A – Information is not statistically meaningful due to an insufficient number of portfolios in the composite for the entire year.

*Performance represents a non-annualized partial period return beginning March 31, 2010.

**Beginning January 1, 2017, pure gross returns are shown as supplemental information for bundled fee accounts and are stated gross of all fees and transaction costs.

***The 3-year annualized ex-post standard deviation is not shown when there are not 36 monthly performance returns available.

International Small Cap Equity Composite includes the discretionary, equity only accounts whose primary investment objective is growth, and secondarily yield, invested in international small cap securities, and benchmarked against MSCI World ex-US Small Cap Net Index. The minimum account size for this composite is \$100 thousand. From inception through November 30, 2013, the composite was compared to the MSCI EAFE Small Cap Net Index. On December 1, 2013, the comparative benchmark for the composite was changed to the MSCI World Ex-US Small Cap Net Index. This index includes Canadian securities, while the EAFE Small Cap Index does not. The list of eligible countries for the strategy has included Canada since its inception, and the strategy has typically included investments in Canadian securities. Therefore, the MSCI World Ex-US Small Cap Net Index is more closely representative of the strategy, and in fact, the strategy has maintained a lower tracking error versus this index since inception. This change of benchmark was made retroactively to the inception of the composite. The International Small Cap Equity Composite was created March 31, 2010. Prior to December 31, 2016, International Small Cap Equity Composite was known as the International Small Cap Core Equity Composite.

Strategic Global Advisors, LLC (SGA) claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS standards. SGA has been independently verified for the periods December 1, 2005 through December 31, 2018.

Verification assesses whether (1) the firm has complied with all the composite construction requirements of the GIPS standards on a firmwide basis and (2) the firm's policies and procedures are designed to calculate and present performance in compliance with the GIPS standards. The International Small Cap Equity Composite has been examined for the periods January 1, 2014 through December 31, 2018. The verification and performance examination reports are available upon request.

SGA is an independently registered investment advisor. The firm maintains a complete list and description of composites, which is available upon request. Results are based on fully discretionary accounts under management, including those accounts no longer with the firm. Composite performance is presented net of foreign withholding taxes on dividends, interest income, and capital gains. Withholding taxes may vary according to the investor's domicile. Composite returns represent investors domiciled primarily in the United States. The MSCI World Ex-US Small Cap Net Index uses withholding tax rates applicable to Luxembourg holding companies.

The U.S. dollar is the currency used to express performance. Returns are presented gross and net of management fees and include the reinvestment of all income. Net of fees performance was calculated using the highest applicable annual management fee of 0.90% applied monthly effective October 1, 2017. Prior to October 1, 2017, net of fees performance was calculated using the highest applicable annual management fee of 1.50% applied monthly. Some accounts in this composite pay a bundled fee (or wrap fee) based on a percentage of assets under management, which in addition to brokerage commissions, the fee includes portfolio monitoring, consulting services, and in some cases, custodial services. From March 31, 2010 through December 31, 2016, gross and net returns have been reduced by the fees for these services. Beginning January 1, 2017, pure gross returns are shown as supplemental information for bundled fee accounts and are stated gross of all fees and transaction costs.

The annual composite dispersion presented is an asset weighted standard deviation calculated for the accounts in the composite the entire year and is only presented for periods with more than five accounts in for the entire year. Policies for valuing portfolios, calculating performance, and preparing compliant presentations are available upon request.

Beginning July 1, 2019, the composite policy requires the temporary removal of any portfolio due to a client-initiated significant cash inflow or outflow, excluding securities received or delivered in kind when the cash inflow or outflow represented 10% or greater of the portfolio assets. Additional information regarding the treatment of significant cash flows is available upon request.

Past performance is not indicative of future results.

Maximum fee is 0.90%; actual investment advisory fees incurred by clients may vary.

Please note that effective October 1, 2018 the composite was re-defined to no longer include accounts benchmarked against the MSCI EAFE Small Cap Net Index. The change was made to accommodate differences that occurred between the composite's intended strategy and the MSCI EAFE Small Cap Net Index.
