

Near term inflation concerns led to a rise in global fixed income yields resulting in a shift in market leadership with longer duration growth stocks underperforming value. The expectations for improving global growth and measured central bank responses to promote a full economic recovery extended equity market performance in the first quarter with the Russell 1000 Index returning 5.91%. In this environment, the U.S. Large Cap Equity strategy outperformed the benchmark.

The SGA Alpha Model had positive performance for the quarter among U.S. large cap equities. Within the Model, the Valuation category was the primary driver as all SGA Valuation factors rebounded significantly after having generally poor performance for the last several years. The other three categories all had more muted performance, with Growth and Quality neutral, and Sentiment slightly negative.

From a sector perspective, the outperformance was a result of positive stock selection primarily in Information Technology, Consumer Discretionary, and Energy. The positive selection was partially offset by negative selection in Health Care and Materials. Within Information Technology, semiconductor equipment makers Applied Materials and KLA Corporation reported solid market growth during a favorable period for the industry. Electronics equipment company Zebra Technologies gained and delivered a notable quarterly earnings beat. Cloud-based file sharing provider Dropbox outperformed after reporting well-received billings.

In Consumer Discretionary, recreational vehicle maker Thor Industries gained and announced revenue and earnings that topped consensus forecasts. Mattress manufacturer Tempur Sealy outperformed and raised 2021 guidance. In Energy, Texas Pacific Land and Schlumberger both contributed to positive performance as oil prices rebounded. In Health Care, Merck underperformed, while IDEXX Laboratories declined after a strong outperformance in 2020. In Materials, Sherwin-Williams revised forward guidance higher but underperformed in the period.

### Ten Calendar Years – Annual Composite Performance

	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021 YTD
<b>U.S. Large Cap Equity (Gross) %</b>	5.85	16.02	36.54	14.12	0.88	9.44	27.42	-8.03	29.99	12.77	7.57

\*Holdings, sector, country, and regional diversification represents the holdings, sectors, and country weights in the SGA U.S. Large Cap Equity representative account as of the date noted. These holdings, sectors, country, and regional weights are subject to change without notice. Individual account data may vary. This information is supplemental to the Annual Disclosure Presentation.

The Russell 1000 Index (Gross) is a free float-adjusted market capitalization weighted index that is designed to measure the equity market performance of large capitalization U.S. securities.

Investors should consider all factors, including investment objectives, fee charges, other expenses and risks carefully before investing in this product. A foreign investment offers diversifying characteristics, but also involves greater risks than investing in securities of U.S. issuers, including currency, political and stock specific risks. SGA products may have a negative return in a variety of markets whether rising or falling. The foreign security performance can be volatile and investors could lose a substantial amount of their investments. This material should not be reproduced or distributed to anyone else, but used solely by the recipient and their investment advisors. This material provides information on Strategic Global Advisors and their investment strategies and is not intended to be construed as an offer to sell or buy their products.

There is potential for shortfall in any investment process due to a variety of factors including, but not limited to, data and system imperfections, analyst judgment, and the complex nature of designing and implementing portfolio construction systems and other quantitative models. Such shortfalls in systematic or quantitative processes in particular pose broader risk because they may be more pervasive in nature. Furthermore, SGA's systems may not necessarily perform in a manner in which they have historically performed or were intended to perform. SGA recognizes that such shortfalls are inherent to both fundamental and systematic or quantitative processes, and believes that combining both approaches improves the opportunity to reduce these shortfalls. However, these efforts may not necessarily result in the identification of profitable investments or the management of risk.

N/A - Information is not statistically meaningful due to an insufficient number of portfolios in the composite for the entire year.

\*Performance represents a non-annualized partial period return beginning on June 30, 2007.

\*\*The following periods, July 1, 2007 through December 31, 2007, August 1, 2008 through July 31, 2013 and after January 1, 2017, pure gross returns are shown as supplemental information for bundled fee accounts and are stated gross of all fees and transaction costs.

\*\*\*The 3-year annualized ex-post standard deviation is not shown when there are not 36 monthly performance returns available.

SGA U.S. Large Cap Equity Composite includes all discretionary, equity only accounts whose primary investment objective is growth, and secondarily yield, and are invested in U.S. large cap securities. This composite does not have a minimum account size. Beginning January 1, 2018, the composite is compared to the Russell 1000 Gross Index. This change was made because the Russell 1000 Gross Index is the most appropriate benchmark for clients in the strategy. This change of benchmark was made retroactively to the inception of the composite. From July 1, 2013 to December 31, 2017, the composite was compared to the Russell 1000 Net Index. The Russell 1000 Net Index is net of dividend withholding taxes applicable to foreign investors. This change was made at the request of SGA's clients investing in the strategy. From October 1, 2009 to June 30, 2013, the composite was compared to the MSCI USA Index. In late 2009, SGA consolidated its benchmarks with MSCI due to economic considerations. From June 30, 2007 to September 30, 2009, the composite was compared to the S&P 500 Index. The U.S. Large Cap Equity Composite was created June 30, 2007. Prior to December 31, 2016, the U.S. Large Cap Equity Composite was known as the U.S. Large Cap Core Equity Composite.

Strategic Global Advisors, LLC (SGA) claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS standards. SGA has been independently verified for the periods December 1, 2005 through June 30, 2020.

Verification assesses whether (1) the firm has complied with all the composite construction requirements of the GIPS standards on a firmwide basis and (2) the firm's policies and procedures are designed to calculate and present performance in compliance with the GIPS standards. The U.S. Large Cap Equity Composite has been examined for the periods July 1, 2007 through June 30, 2020. The verification and performance examination reports are available upon request.

SGA is an independently registered investment advisor. The firm maintains a complete list and description of composites, which is available upon request. Results are based on fully discretionary accounts under management, including those accounts no longer with the firm.

The U.S. dollar is the currency used to express performance. Returns are presented gross and net of management fees and include the reinvestment of all income. From July 1, 2007 through December 31, 2007 and August 1, 2008 through July 31, 2013, 100% of the composite consisted of bundled fee (or wrap fee) accounts. For bundled fee accounts, these accounts pay a fee based on a percentage of assets under management, which besides brokerage commissions, this fee includes portfolio monitoring, consulting services, and in some cases, custodial services. Gross returns are shown as supplemental information for bundled fee accounts and are stated gross of all fees and transaction costs. Net of fees performance was calculated using the highest applicable annual management fee of 0.55% applied monthly effective October 1, 2017. Prior to October 1, 2017, net of fees performance was calculated using the highest applicable annual management fee of 0.75% applied monthly. Between July 31, 2013 and December 31, 2016, gross and net returns were reduced by the fees for bundled fee account services. Prior to August 1, 2013, 100% of the composite was non-fee paying accounts. After August 1, 2013, non-fee paying accounts were less than 1% of the composite.

The annual composite dispersion presented is an asset weighted standard deviation calculated for the accounts in the composite the entire year and is only presented for periods with more than five accounts in for the entire year. Policies for valuing portfolios, calculating performance, and preparing compliant presentations are available upon request.

From September 30, 2013 to March 31, 2014, composite policy included two scenarios that require the temporary removal of any portfolio due to a client initiated significant cash inflow or outflow: 1) When the cash inflow or outflow represents from over 5% to 10% of portfolio assets and it takes longer than five trading days to reduce cash levels to less than 5%, and 2) When the cash inflow or outflow represents more than 10% of portfolio assets. The temporary removal of such an account occurs at the beginning of the month in which the significant cash flow occurs and the account re-enters the composite at the beginning of the month after the cash level in the portfolio is reduced to less than 5%. Additional information regarding the treatment of significant cash flows is available upon request.

Past performance is not indicative of future results.

Maximum fee is 0.55%; actual investment advisory fees incurred by clients may vary.
