

Global markets fell in the first quarter due to ongoing pandemic-related challenges including supply chain disruptions and rising inflation, which was further exacerbated by the Russia-Ukraine conflict. The surge in energy and commodity costs dampened global growth expectations which was later followed by interest rate hikes by several central banks. International stocks, as measured by the MSCI EAFE Net Index, returned -5.91% in the first quarter, in this environment, the International Equity strategy modestly underperformed the benchmark.

The SGA Alpha Model had negative performance for the quarter among non-U.S. large cap developed equities. Within the Model, the Growth and Sentiment categories were the largest detractors, while the Quality category also slightly underperformed. This was partially offset by strong performance from the Valuation category, particularly in January and February, where SGA's Residual Income Model was the top performing factor.

Stock selection was positive in Information Technology and Communication Services, offset by negative selection in Financials, Energy, and Health Care. In Information Technology, cyber security firm Check Point Software reported increased billings growth. In Communication Services, KDDI Corporation cited a positive earnings outlook and Nintendo announced a robust game pipeline. In Financials, European banks retreated including Credit Agricole and Barclays which reported a trading error. In Materials, positive contributors were mining companies Rio Tinto and BHP, which were offset by U.K. based Evraz which had direct exposure to the Russian-Ukraine conflict. In Health Care, Hoya and GN Store Nord underperformed.

Stock selection was strong in Japan, France, and Israel, offset by weak selection in the U.K., Germany, and Denmark. Companies sensitive to the Russian-Ukraine conflict or to rising commodity prices underperformed including U.K. miner Evraz and German companies Covestro, logistics firm Deutsche Post, and equipment maker GEA Group. Retail companies also retreated after reporting moderating sales trends and included jeweler Pandora in Denmark and Next in the U.K. In France, contributors included defense firm Thales and pharmaceutical firm Ipsen which beat earnings expectations. In Japan, Mitsui & Co. benefited from higher metals exposure, and in Israel, Check Point Software drove positive selection.

#### Ten Calendar Years – Annual Composite Performance

	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022 YTD

\*Holdings, sector, country, and regional diversification represents the holdings, sectors, and country weights in the SGA International Equity representative account as of the date noted. These holdings, sectors, country, and regional weights are subject to change without notice. Individual account data may vary. This information is supplemental to the GIPS® Report.

The MSCI EAFE (Europe, Australasia, Far East) Index (Net) is a free float-adjusted market capitalization weighted index that is designed to measure the equity market performance of developed markets, excluding the U.S. and Canada. The MSCI EAFE Index (Net) returns include reinvestment of dividends and other earnings, and are not available for direct investment.

Investors should consider all factors, including investment objectives, fee charges, other expenses and risks carefully before investing in this product. A foreign investment offers diversifying characteristics, but also involves greater risks than investing in securities of U.S. issuers, including currency, political and stock specific risks. SGA products may have a negative return in a variety of markets whether rising or falling. The foreign security performance can be volatile and investors could lose a substantial amount of their investments. This material should not be reproduced or distributed to anyone else, but used solely by the recipient and their investment advisors. This material provides information on Strategic Global Advisors and their investment strategies and is not intended to be construed as an offer to sell or buy their products.

There is potential for shortfall in any investment process due to a variety of factors including, but not limited to, data and system imperfections, analyst judgment, and the complex nature of designing and implementing portfolio construction systems and other quantitative models. Such shortfalls in systematic or quantitative processes in particular pose broader risk because they may be more pervasive in nature. Furthermore, SGA's systems may not necessarily perform in a manner in which they have historically performed or were intended to perform. SGA recognizes that such shortfalls are inherent to both fundamental and systematic or quantitative processes, and believes that combining both approaches improves the opportunity to reduce these shortfalls. However, these efforts may not necessarily result in the identification of profitable investments or the management of risk.

N/A - Information is not statistically meaningful due to an insufficient number of portfolios in the composite for the entire year.

\*Beginning January 1, 2017, pure gross returns are shown as supplemental information for bundled fee accounts and are stated gross of all fees and transaction costs.

\*\*The 3-year annualized ex-post standard deviation is not shown when there are not 36 monthly performance returns available.

SGA International Equity Composite includes all discretionary, equity only accounts whose primary investment objective is growth, and secondarily yield, and are invested in international large cap securities. The minimum account size for this composite is \$100 thousand. Key material risks include foreign company, currency, political, and economic events unique to a country or region that may affect those markets and their issuers. Beginning January 1, 2017, accounts in this composite may contain client imposed investment restrictions. For comparison purposes, the composite is compared to the MSCI EAFE Net Index, which includes large and mid cap companies in developed market countries, excluding the U.S. and Canada. The International Equity Composite was created and inceptioned on November 30, 2005. Prior to December 31, 2016, the International Equity Composite was known as the International Large Cap Core Equity Composite.

Strategic Global Advisors, LLC (SGA) claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS standards. SGA has been independently verified for the periods December 1, 2005 through December 31, 2020. A firm that claims compliance with the GIPS standards must establish policies and procedures for complying with all the applicable requirements of the GIPS standards. Verification provides assurance on whether the firm's policies and procedures related to composite and pooled fund maintenance, as well as the calculation, presentation, and distribution of performance, have been designed in compliance with the GIPS standards and have been implemented on a firm-wide basis. The International Equity Composite has had a performance examination for the periods December 1, 2005 through June 30, 2020. The verification and performance examination reports are available upon request.

SGA is an independently registered investment advisor. Registration does not imply any level of skill or training. A list of all composite and pooled fund investment strategies offered by the firm, with a description of each strategy, is available upon request. The type of portfolios in which each strategy is available (segregated account, limited distribution pooled fund, or broad distribution pooled fund) is indicated in the description of each strategy. Results are based on fully discretionary accounts under management, including those accounts no longer with the firm. Composite performance is presented net of foreign withholding taxes on dividends, interest income, and capital gains. Withholding taxes may vary according to the investor's domicile. Composite returns represent investors domiciled primarily in the United States. The MSCI EAFE Net Index uses withholding tax rates applicable to Luxembourg holding companies.

The U.S. dollar is the currency used to express performance. Returns are presented gross and net of management fees and include the reinvestment of all income. Composite net of fees performance was calculated by reducing the gross of fees return by the maximum annual management fee of 0.75% applied monthly effective October 1, 2017. Prior to October 1, 2017, composite net of fees performance was calculated by reducing the gross of fees return by the maximum annual management fee of 1.00% applied monthly. Bundled fee (or wrap fee) accounts are included in the composite, and those accounts pay a fee based on a percentage of assets under management, which besides brokerage commissions, this fee includes portfolio monitoring, consulting services, and in some cases, custodial services. From November 30, 2005 through December 31, 2016, gross and net returns have been reduced by the fees for these services. Beginning January 1, 2017, pure gross returns are shown as supplemental information for bundled fee accounts and are stated gross of all fees and transaction costs. Please note that the maximum annual management fee for the respective period may differ from the actual investment advisory fees incurred by clients.

The annual composite dispersion presented is a gross of fees asset weighted standard deviation calculated for the accounts in the composite the entire year and is only presented for periods with more than five accounts in for the entire year. Policies for valuing investments, calculating performance, and preparing GIPS Reports are available upon request.

Factsheet — March 31, 2022

## SGA International Equity

---

From September 30, 2013 to March 31, 2014, composite policy included two scenarios that require the temporary removal of any portfolio due to a client initiated significant cash inflow or outflow: 1) When the cash inflow or outflow represents from over 5% to 10% of portfolio assets and it takes longer than five trading days to reduce cash levels to less than 5%, and 2) When the cash inflow or outflow represents more than 10% of portfolio assets. The temporary removal of such an account occurs at the beginning of the month in which the significant cash flow occurs and the account re-enters the composite at the beginning of the month after the cash level in the portfolio is reduced to less than 5%. Beginning June 1, 2019, the composite policy requires the temporary removal of any portfolio due to a client-initiated significant cash inflow or outflow, excluding securities received or delivered in kind when the cash inflow or outflow represented 10% or greater of the portfolio assets. Additional information regarding the treatment of significant cash flows is available upon request.

Past performance is not indicative of future results.

Maximum annual management fee is 0.75%; actual investment advisory fees incurred by clients may vary.
