

SGA International Small Cap Equity

Global stocks rallied in Q4 after encouraging economic reports that high inflation may have peaked, paving the way toward fewer interest rate hikes, while relaxed COVID rules from China further supported equities. In this environment, international small cap stocks, as measured by the MSCI World ex USA Small Cap Net Index, returned 15.21% and the International Small Cap Equity strategy outperformed the benchmark.

The SGA Alpha Model had positive performance for Q4 among non-U.S. small cap developed equities. Within the Model, Valuation was the strongest contributor. Quality had a neutral impact; however, the interaction between Valuation and Quality also contributed as companies with material exposure to both performed better than either category on its own. Growth detracted, while Sentiment had a neutral impact.

In terms of sector, positive stock selection drove outperformance. Selection was strongest in Industrials where all four categories in SGA's Alpha Model delivered strong performance. Materials and Communication Services were also areas of strong selection, led by stocks that ranked well in Valuation and Quality, including top contributors French glass container maker Verallia and German event ticketing firm CTS Eventim. Positive selection was tempered by poor selection in Information Technology, where the Alpha Model underperformed, and Financials, with underweight in European banks, which rallied, while positions in First International Bank of Israel and Bank of NT Butterfield detracted.

Stock selection drove outperformance from a country standpoint. Selection was strongest in France, Canada, and Japan, partially offset by weak selection in the U.K. resulting from exposure to Energy stocks, including Enquest and Harbour Energy, which significantly underperformed as the country introduced a new windfall profits tax scheme. Positive selection in France was led by Verallia as demand for consumer staples remained resilient. In Canada, miner Torex Gold contributed as strong exploration results extend the life of its main mine. In Japan, contributors included beneficiaries of Valuation and Quality's performance in Industrials, IHI Corp and Fujikura, as well as retail drug chain MatsukiyoCocokara, and Gunma Bank, a beneficiary of the central bank's new yield curve policy.

Inception to Date – Annual Composite Performance

	QTD	YTD	1 Year	3 Year	5 Year	7 Year	10 Year	ITD (03/31/2010)
International Small Cap Equity (Gross) %	17.35	-20.62	-20.62	-1.00	-1.38	4.08	6.97	7.98

*Holdings, sector, country, and regional diversification represents the holdings, sectors, and country weights in the SGA International Small Cap Equity representative account as of the date noted. These holdings, sectors, country, and regional weights are subject to change without notice. Individual account data may vary. This information is supplemental to the GIPS® Report.

The MSCI World ex USA Small Cap Index (Net) is a free float-adjusted market capitalization weighted index that is designed to measure the equity market performance of small cap securities in the developed markets excluding the U.S. The MSCI World ex USA Small Cap Index (Net) returns include reinvestment of dividends and other earnings, and are not available for direct investment.

Investors should consider all factors, including investment objectives, fee charges, other expenses and risks carefully before investing in this product. A foreign investment offers diversifying characteristics, but also involves greater risks than investing in securities of U.S. issuers, including currency, political and stock specific risks. SGA products may have a negative return in a variety of markets whether rising or falling. The foreign security performance can be volatile and investors could lose a substantial amount of their investments. This material should not be reproduced or distributed to anyone else, but used solely by the recipient and their investment advisors. This material provides information on Strategic Global Advisors and their investment strategies and is not intended to be construed as an offer to sell or buy their products.

There is potential for shortfall in any investment process due to a variety of factors including, but not limited to, data and system imperfections, analyst judgment, and the complex nature of designing and implementing portfolio construction systems and other quantitative models. Such shortfalls in systematic or quantitative processes in particular pose broader risk because they may be more pervasive in nature. Furthermore, SGA's systems may not necessarily perform in a manner in which they have historically performed or were intended to perform. SGA recognizes that such shortfalls are inherent to both fundamental and systematic or quantitative processes, and believes that combining both approaches improves the opportunity to reduce these shortfalls. However, these efforts may not necessarily result in the identification of profitable investments or the management of risk.

N/A - Information is not statistically meaningful due to an insufficient number of portfolios in the composite for the entire year.

*Performance represents a non-annualized partial period return beginning March 31, 2010.

**Beginning January 1, 2017, pure gross returns are shown as supplemental information for bundled fee accounts and are stated gross of all fees and transaction costs.

***The 3-year annualized ex-post standard deviation is not shown when there are not 36 monthly performance returns available.

SGA International Small Cap Equity Composite includes the discretionary, equity only accounts whose primary investment objective is growth, and secondarily yield, invested in international small cap securities, and benchmarked against MSCI World ex-US Small Cap Net Index, which includes small-cap companies in developed markets, excluding the U.S. and Canada. The minimum account size for this composite is \$100 thousand. Key material risks include foreign company, currency, political, and economic events unique to a country or region that may affect those markets and their issuers. Moreover, small-capitalization companies may be more vulnerable to adverse business or economic events than larger, more established companies. From inception through November 30, 2013, the composite was compared to the MSCI EAFE Small Cap Net Index. On December 1, 2013, the comparative benchmark for the composite was changed to the MSCI World Ex-US Small Cap Net Index. This index includes Canadian securities, while the EAFE Small Cap Index does not. The list of eligible countries for the strategy has included Canada since its inception, and the strategy has typically included investments in Canadian securities. Therefore, the MSCI World Ex-US Small Cap Net Index is more closely representative of the strategy, and in fact, the strategy has maintained a lower tracking error versus this index since inception. This change of benchmark was made retroactively to the inception of the composite. The International Small Cap Equity Composite was created and incepted on March 31, 2010. Prior to December 31, 2016, International Small Cap Equity Composite was known as the International Small Cap Core Equity Composite.

Strategic Global Advisors, LLC (SGA) claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS standards. SGA has been independently verified for the periods December 1, 2005 through December 31, 2021.

A firm that claims compliance with the GIPS standards must establish policies and procedures for complying with all the applicable requirements of the GIPS standards. Verification provides assurance on whether the firm's policies and procedures related to composite and pooled fund maintenance, as well as the calculation, presentation, and distribution of performance, have been designed in compliance with the GIPS standards and have been implemented on a firm-wide basis. The International Small Cap Equity Composite has had a performance examination for the periods January 1, 2014 through December 31, 2021. The verification and performance examination reports are available upon request.

SGA is an independently registered investment advisor. Registration does not imply any level of skill or training. A list of all composite and pooled fund investment strategies offered by the firm, with a description of each strategy, is available upon request. The type of portfolios in which each strategy is available (segregated account, limited distribution pooled fund, or broad distribution pooled fund) is indicated in the description of each strategy. Results are based on fully discretionary accounts under management, including those accounts no longer with the firm. Composite performance is presented net of foreign withholding taxes on dividends, interest income, and capital gains. Withholding taxes may vary according to the investor's domicile. Composite returns represent investors domiciled primarily in the United States. The MSCI World Ex-US Small Cap Net Index uses withholding tax rates applicable to Luxembourg holding companies.

The U.S. dollar is the currency used to express performance. Returns are presented gross and net of management fees and include the reinvestment of all income. Composite net of fees performance was calculated by reducing the gross of fees return by the maximum annual management fee of 0.90% applied monthly effective October 1, 2017. Prior to October 1, 2017, composite net of fees performance was calculated using the maximum annual management fee of 1.50% applied monthly. Some accounts in this composite pay a bundled fee (or wrap fee) based on a percentage of assets under management, which in addition to brokerage commissions, the fee includes portfolio monitoring, consulting services, and in some cases, custodial services. From March 31, 2010 through December 31, 2016, gross and net returns have been reduced by the fees for these services. Beginning January 1, 2017, pure gross returns are shown as supplemental information for bundled fee accounts and are stated gross of all fees and transaction costs. Please note that the maximum annual management fee for the respective period may differ from the actual investment advisory fees incurred by clients.

The annual composite dispersion presented is a gross of fees asset weighted standard deviation calculated for the accounts in the composite the entire year and is only presented for periods with more than five accounts in for the entire year. Policies for valuing investments, calculating performance, and preparing GIPS Reports are available upon request.

Factsheet — December 31, 2022

SGA International Small Cap Equity

Beginning July 1, 2019, the composite policy requires the temporary removal of any portfolio due to a client-initiated significant cash inflow or outflow, excluding securities received or delivered in kind when the cash inflow or outflow represented 10% or greater of the portfolio assets. Additional information regarding the treatment of significant cash flows is available upon request.

Past performance is not indicative of future results.

Maximum annual management fee is 0.90%; actual investment advisory fees incurred by clients may vary.

Please note that effective October 1, 2018 the composite was re-defined to no longer include accounts benchmarked against the MSCI EAFE Small Cap Net Index. The change was made to accommodate differences that occurred between the composite's intended strategy and the MSCI EAFE Small Cap Net Index.
